

# Moon Journal

## Instructions:

Start your Moon Journal at least 12 days before the Full Moon. Pick a viewing spot that has a good view of the southern sky. Every clear day for the next two weeks, you will go to that spot at sunset, find the Moon in the sky, and draw its shape in your Moon Journal.

### 1. Moon Shape-shifting:

Fill in the month and dates in the Moon Calendar. Each day, draw what shape the Moon looks like.

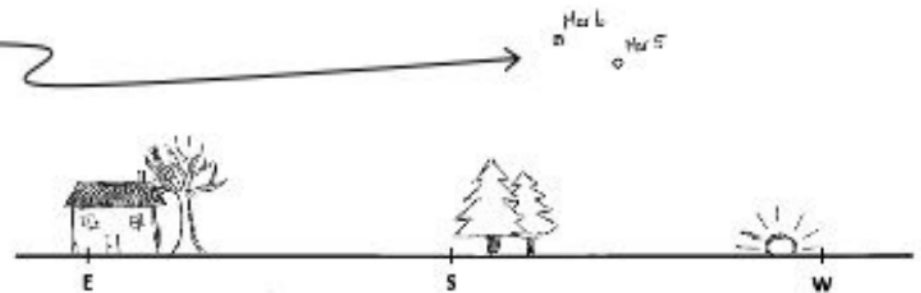

### 2. Moon Tracking:

On your first day, figure out where north, south, east, and west are. On the Moon Tracking sheet, draw where the Sun is when it's setting. You can also include some landmarks on your horizon (houses, trees, and so on).

*Example:*

Mark where the Moon is compared to the landmarks you see and label it with the date, like this:

You're going to mark the Moon's position many times, so make your marks small.
